Distance Measures

Question 1:

Consider the following three vectors u, v, w in a 6-dimensional space:

u = [1, 0.25, 0, 0, 0.5, 0] v = [0.75, 0, 0, 0.2, 0.4, 0] w = [0, 0.1, 0.75, 0, 0, 1]

Suppose cos(x,y) denotes the similarity of vectors x and y under the cosine similarity measure. Compute all three pairwise similarities among u,v,w.

solution

$$|\mathbf{u}| = \sqrt{1} \cdot 2 + 0.25 \cdot 2 + 0^2 + 0^2 + 0.5 \cdot 2 + 0^2 = 1.145$$

 $|\mathbf{v}| = \sqrt{0}.75 \cdot 2^2 + 0^2 + 0^2 + 0.2 \cdot 2 + 0.4 \cdot 2 + 0^2 = 0.873$
 $|\mathbf{w}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.75 \cdot 2 + 0^2 + 0^2 + 1^2 = 1.25$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.75 \cdot 2 + 0^2 + 0^2 + 1^2 = 1.25$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.75 \cdot 2 + 0^2 + 0^2 + 0^2 = 1.25$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.75 \cdot 2 + 0^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.75 \cdot 2 + 0^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.75 \cdot 2 + 0^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.1^2 + 0.1^2 + 0.1^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.1^2 + 0.1^2 + 0.1^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.1^2 + 0.1^2 + 0.1^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.1^2 + 0.1^2 + 0.1^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2 + 0.1^2 + 0.1^2 + 0.1^2 + 0.1^2 = 0$
 $|\mathbf{v}| = \sqrt{0} \cdot 2 + 0.1^2$

Question 2:

Here are five vectors in a 10-dimensional space:

Compute the Jaccard distance (not Jaccard "measure") between each pair of the vectors.

Jaccard Distance (A, B) = 1 - (1/7) = 6/7

Jaccard Distance (A, C) = 1 - (0/8) = 1

Jaccard Distance (A, D) = 1 - (3/10) = 7/10

Jaccard Distance (A, E) = 1 - (3/10) = 7/10

Jaccard Distance (B, C) = 1 - (1/7) = 6/7

Jaccard Distance (B, D) = 1 - (4/9) = 5/9

Jaccard Distance (B, E) = 1 - (3/10) = 7/10

Jaccard Distance (C, D) = 1 - (4/9) = 5/9

Jaccard Distance (C, E) = 1 - (4/9) = 5/9

Jaccard Distance (D, E) = 1 - (8/10) = 2/10

Question 3:

Here are five vectors in a 10-dimensional space:

Compute the Manhattan distance (L_1 norm) between each two of these vectors.

Answer:

Let A = 1111000000; B = 0100100101, C = 0000011110, D = 0111111111, E = 1011111111

Manhattan distance of A, B = 6

Manhattan distance of A, C = 8

Manhattan distance of A, D = 7

Manhattan distance of A, E = 7

Manhattan distance of B, C = 6

Manhattan distance of B, D = 5

Manhattan distance of B, E = 7

Manhattan distance of C, D = 5

Manhattan distance of C, E = 5

Manhattan distance of D, E = 2

Question 4: The edit distance is the minimum number of character insertions and character deletions required to turn one string into another. Compute the edit distance between each pair of the strings **he**, **she**, **his**, and **hers**.

Solution:

The edit distance between he and she = 1

The edit distance between he and his = 3

The edit distance between he and hers = 2

The edit distance between she and his = 4

The edit distance between she and hers = 3

The edit distance between his and hers = 3
